Quiz 2 Review Guide

- ➢ 1. Default Constructors
  - ➔ When does the compiler provide a default constructor?
  - ➔ When does the compiler implicitly call the "base class default constructor" in a derived class?
- ➢ 2. Access modifiers
  - ➔ Difference between Public, Private, and Protected
- ➢ How are virtual functions used in polymorphism?
- ➢ In a function that uses polymorphism, do you want to use pass by value or pass by reference for the parameter(s)? Why?
- ➢ If a derived class overrides a base class method, how can you call the overridden base class method within a derived class method?
